

Mosquito Control Assurance Program

For Construction Site

Target All Phases of the Mosquito's Life Cycle

Greencare is the industry expert in Integrated Mosquito Management programs. These programs include responsible efforts to manage mosquitoes and help to prevent the transmission of serious diseases.

Our Approach:

Step 1. Setting Up Surveillance System

- Our surveillance system provides us with valuable data that is captured and analysed in our proprietary database.
- Our data helps clients make better decisions, which lead to better result.

Step 2. Data Collection & Reporting

- A keystone of the Integrated Mosquito Management approach is managing data. Every activity that is performed at Greencare is entered into our proprietary database for analysis and reporting.
- These reports are used both for our internal analysis and our presentation to customers.

Step 3. Larval Mosquito Control

- Eliminating mosquitoes prior to them becoming adults is an important element of controlling mosquito-borne diseases because it stops mosquitoes before they acquire the virus and have the opportunity to transmit it to people.
- Chemical Used: New Cyper 6.5 EC

Step 4. Adult Mosquito Control

- We use Demand CS for water-based misting that offers excellent indoor and outdoor mosquito control. Demand's micro-encapsulated technology means that when you apply it, it leaves thousands of micro particles that bind to the surface offering long-term protection up to **90 days** and fast insect knock-down. In fact, Demand CS is up to **200 times** more active on mosquitoes

Step 5. Inspection Audit Report

- We provide state of the art – very high standard monthly inspection report with detailed description in findings with attached pictures classified in zones and different category such as High Risk | Medium Risk | Moderate Risk with follow-up action to take.
- Please request for our **Sample Inspection Report** for reference.

Step 6. Education & Advisory

- Understanding how to properly eliminate mosquito breeding habitat and take correct measures is critical. Educating the in-house team empowers them to take control of the mosquitoes breeding in their construction site.
- We will also provide advisory on proper house keeping and source reduction and other pest control related matters.
